APPLICATIONS

Data applica-
tions in the health care sector are increasing. Big Data solutions that help in the management of patient records can reduce costs for patients and healthcare providers. For example, Big Data solutions can be used to monitor and analyze patient data in real-time, allowing healthcare providers to identify potential issues early and intervene accordingly.

Digital India

The government has been a driving force in creating platforms and large databases which will require the acquisition and manipulation of massive amounts of data. Digital India, for example, is a government initiative to integrate the government departments and the people of India.
